British Guiana The 1876 De La Rue issues

On joining the UPU in 1877 Br Guiana had to circulate examples of its stamps to UPU members. It did this on 1 October 1879, and decided for security reasons to provide examples overprinted or perforated "specimen" in line with Great Britain's practice at the time, although other countries provided normal unused examples. In total 80 examples of each value were circulated.

SPECIMEN Samuel type BG2

The overprints were applied diagonally in order to provide space for the full overprint.

The 1876 48 cents is unrecorded with this hand-stamp and the 48 cents stamps in the UPU collections are all the 1866 issue in perf 10. Bendon suggests that unused stocks of the earlier stamp were still being sold in the Post Office in 1879 and the 1876 stamp had not yet been issued.

The 1866 48 cents perf 10 included in the 1879 UPU circulation.

cents were printed. Two basic settings of each value are known, one in four rows of three stamps and the other in six rows of two stamps. On each pane of 12, five units show a three-masted ship and the other seven units a two-masted ship. In addition each ship is surrounded by a frame of crosses which have different spacing and these spaces can be used to identify the position of each stamp in the pane of 12. Another major variety is a large 2 in 2 cents on the 2c value. For the 1 cent value, three different printings can be distinguished and for the 2 cents four printings. Some plate positions can be separated identified as unique to an individual printing but there are others that cannot be plated in the absence of additional plating information provided by adjoining units.

1 cent, the first setting, four rows of three Reconstructed pane of 12

& CENTER IN

e fa with soil

In the first setting the three masted ship appears on positions 1, 2, 3, 4, 9 and 10. All the panes of the first setting of both values were split into two blocks of six prior to sale.

1 cent, the first setting, four rows of three

Reconstructed pane of 12

Used block of six (#7 to 12), pair and singles.

12 Jan 1882

Used locally in Georgetown, from second row in the setting (Pos. 3-6).

9 January was the date on which these stamps were issued.

British Guiana The 1882 Baldwin Issue 1 cent, the second setting, six rows of two

The fifth printing

Misperforated so no lower set of crosses. Unit 8, 5th or 7th printings.

Used sheet of 12.

Mint sheet of 12.

The fifth printing from the second setting shows the three masted ship on units 1, 2, 4, 5, 6 and 10. This printing can be separated from the seventh printing because unit 7 has a serif at the base of the 1.

24 Jan 1882

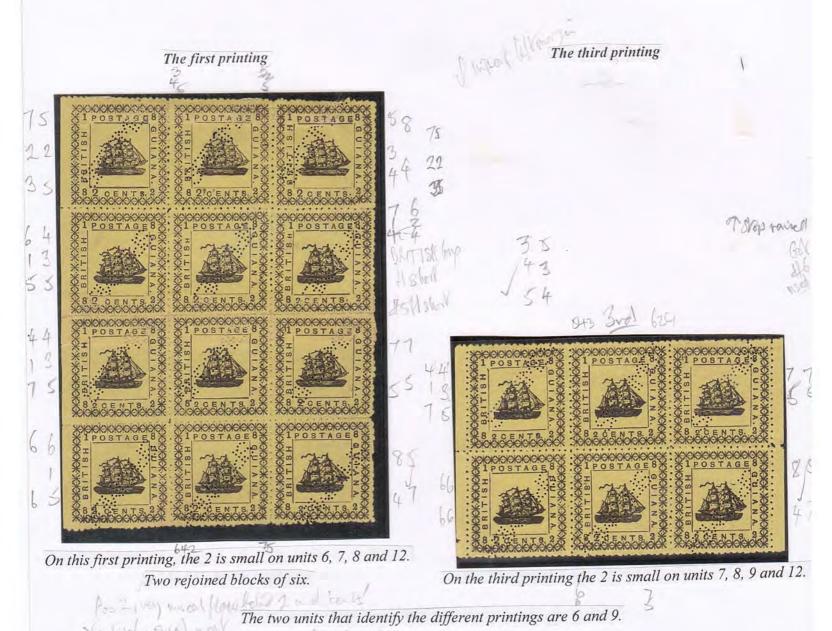

Local cover from Georgetown to Enmore (rare type 2 Enmore arrival on face).

2 cents, the first setting, four rows of three

The size of the specimen perforation (previously used to cancel the 1867 48 cents ship adhesive) meant it had to be applied sideways to accommodate all the letters. On the first setting it slopes to the north east and on the second to the southeast. In the first setting, the stamps in the second and fourth rows are inverted whereas in the second setting all the stamps in the left hand column have the specimen inverted, while in the right hand column it is upright. Each of these characteristics helps to identify the different settings, but there are many isolated stamps that cannot be allocated to one printing with any certainty.

Whereas the first setting of the 1 cent only had one printing, and only one major value tablet variety (the serifed 1 on unit 7), four of the twelve 2 cents stamps show a smaller 2 making it is much easier to plate.

2 cents, the first printing, four rows of three

Two rejoined blocks of six.

As with the 1 cent denomination, there are six two-masted and six three-masted ships in each printing. On each of the first settings the three masts are on units 1-4 and 9-10.

The third printing, four rows of three

First or third printing unit 12.

Units 7-12 (units 9 and 10 with three masts).

The small 2 on unit 9 identifies this as the third printing.

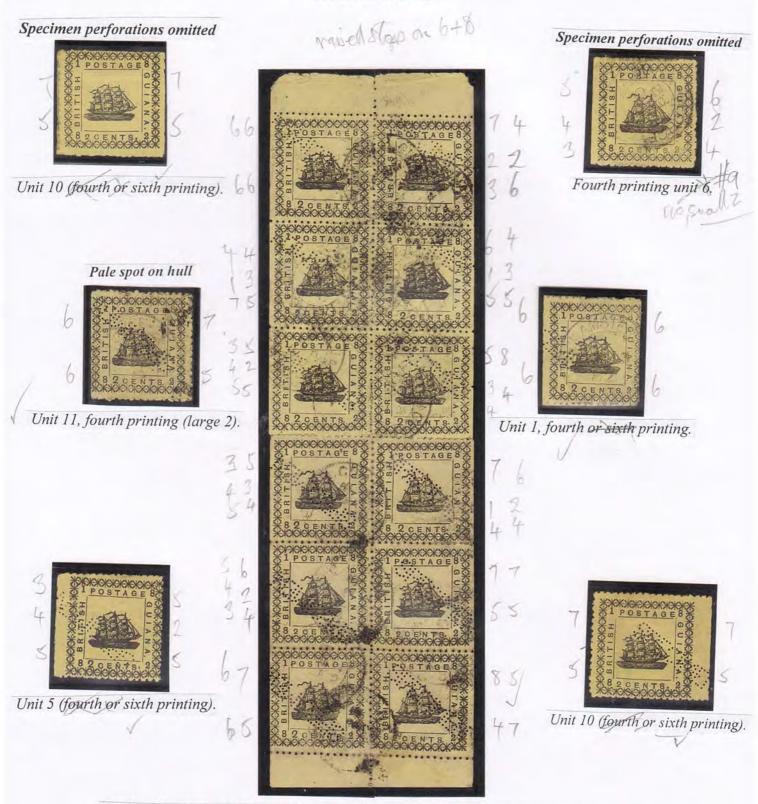

Third printing unit 6.
Large 2 so third printing.

2 cents, the second setting, six rows of two

The fourth printing

The fourth printing has four units that differentiate it from the sixth. Units 6 and 12 have different cross placements. On unit 3 the 2 is small and on 11 it is large, while the sixth printing is the reverse.

The sixth printing can be separated for the fourth by the small 2 not large on unit 11 and a large not small 2 on unit 3. On both printings unit 11 shows a pale patch at the centre of the hull. This defect is not evident on any unit from the first setting.

CC watermark examples perforated "specimen"

Samuel states that all CC values to 24 cents were circulated with specimen perforations to the UPU. However Bendon, after consulting many UPU collections, lists the 12 and 24 cents only.

This 1866 48 cents perforated "specimen" is present in several UPU collections.

Post-1882 set perforated "specimen"

Not recorded by Samuel.

CC watermark

CC watermark examples

The five low values have CA watermark so this must have been a presentation set.

The 96 cents has not been recorded with this specimen perforation.

The 96 cents has not been recorded with this hand-stamp.

SPECIMEN

De La Rue file specimens

No specimens for the CA watermark set were circulated to UPU members as they had received the CC set. These two from the De La Rue archives are the only ones known with this handstamp.

British Guiana The 1876 De La Rue issues

The 1882 printings with watermark changed to CA

The issued stamps

In 1882 stocks of the low values ran out and new printings were ordered. They can be identified by the CA watermark introduced in 1881.

Watermark varieties used

watermark inverted

First example recorded

watermark reversed

watermark reversed

On 15 July 1890 a series of 1 cent stamps were created by overprinting four 1888 high values. Townsend and Howe suggest this was done to use up reserve stocks before their gum dried up.

Distributed by the UPU

As the overprints were performed by the local PO in Georgetown and not by De La Rue in London, the stamps circulated for UPU purposes had no specimen overprint. However, these three can be distinguished as specimens because of the Angolan receiving authority hand-stamp.

British Guiana The 1888 Revenue issues

In 1888 the Colonial legislature approved new stamp duties, so there was an urgent need for new revenue stamps. De Le Rue replied on 12 July 1888 that it would take ten weeks to prepare the new stamps, but that they could supply a temporary series within one month by overprinting "revenue" and the various duties on an 1876 postage plate. The overprint plates were priced at 3 guineas each. On 22 Sept the revenue stamps were legalised for postal use.
